To the Admissions Committee,

I am Wajeeha Azmat a lecturer in the university of agriculture faisalabad I recommend Mr. Sajjad Ahmad for admission to your graduate program and consideration for a competitive scholarship. I taught Sajjad during his sixth semester in the *Mobile Application Development* course, which allowed me to closely observe his technical preparation and problem-solving approach.

Sajjad performed at a high level throughout the course and ranked in the top 2% of students based on subject performance. He earned an **A grade** and showed a solid practical understanding of mobile application development through consistent work in design, implementation, and evaluation tasks. He also developed several mobile applications in Java, which helped establish strong programming fundamentals.

Beyond coursework, Sajjad took initiative in both departmental and project-based activities relevant to graduate study. He contributed to organizing technical webinars and supported student participation in international coding competitions. In addition, during Tech & Entrepreneurship Summit 4.0 Hackathon in our computer science department, his team developed an AI-based healthcare solution that received strong feedback from faculty members and secured first place. Sajjad contributed directly to the *MediVision AI* project, working on model integration, training, and overall system development. These experiences show his ability to apply academic concepts to complex, problem-driven tasks.

Based on my experience teaching him, Sajjad is well prepared for graduate-level study. He approaches technical challenges carefully and shows the discipline required for advanced academic work. I recommend him for admission to your graduate program.

Sincerely,

Wajeeha Azmat (Lecturer)
Department of Computer Science
University of Agriculture, Faisalabad
